

EPL 8738

Re-analysed first-pass data reveals four untested gold & REE targets in the Damara Belt, Namibia

Seeking an accelerated earn-in partner for a 1,000m maiden drilling programme

02 Licence & tenure confirmation

A valid exploration licence with clear ownership and tenure

LICENCE

EPL 8738

Exclusive Prospecting Licence

Holder

Simed Trading CC
Reg. cc/2012/7613

Issued

26 March 2024

Expires

25 March 2027

SCALE & COMMODITIES

Area

393 km² (39,384 ha)

Minerals

Precious Metals
Base & Rare Metals
Industrial Minerals
Dimension Stone

STATUS

Regions

Otjozondjupa & Erongo

ECC

Valid to March 2027

Ownership

100% Namibian-owned
Exploration-stage tenure

03 Location & geological setting

Northern Central Zone, Damara Orogen

THE ADDRESS

71 km north of Omaruru • 25 km east of Kalkveld

Pan-African Damara Orogen (~530 Ma)

Key geological elements

- Otjihorongo Thrust
- Karibib Formation marbles
- Kuiseb schists
- Late-tectonic Salem granites

WHY THE COVER MATTERS

Deep Quaternary cover of sand, gravel, scree and calcrete masks bedrock.

Surface geochemistry therefore provides a practical vectoring tool.

The exploration thesis is structural: identify geochemical vectors, extend them beneath cover, then test the strongest targets by geophysics and drilling.

04 Previous work

Damaran Exploration | July 2024 – February 2025

209

Stream sediment samples

BLEG Au

418

Soil samples

Aqua Regia • 53 elements

4

Rock chip samples

Aqua Regia

N\$1.11M

Reported exploration

expenditure

Certified labs: Intertek Tsumeb,

Genalysis Perth

Original interpretation: “low tenor” / no target significant enough to continue work.

05 What changed: raw-data re-analysis

Independent review of the laboratory files, not a new sampling campaign

GOLD

13.11 ppb Au

Maximum stream-sediment value identified in raw files

8.4 ppb Au

Selected soil anomaly

16.8 ppb Au

Rock-chip result

REE / PATHFINDERS

385 ppm Ce

Cerium

522 ppm Y

Yttrium

1,079 ppm Th

Thorium — not highlighted in the original interpretation

EXPLORATION GAP

98%

of the licence remains untested at soil / geophysical scale

4

testable targets — the re-analysis reframes the project away from a licence-wide anomaly

Key message: the opportunity is not a claim of a resource. It is a drill-focused target generation story.

06 Target 1: Onjombojumuwiwa Au-As corridor

Highest priority | 1.6 km geochemical vector toward a buried source

THE VECTOR

RE04772 — 13.11 ppb Au

E595906 / N7687001

RE05984 — 52.11 ppm As

1,614 m NNE

Interpretation

Au-As pathfinder displacement may vector toward a primary source.

STRUCTURE

NE-SW splay of the Otjihorongo Thrust

418-sample soil grid — anomaly remains open northward

Undrilled

No drilling • No IP • No geophysics

NEXT TEST

1. Extend soil coverage north
2. IP / magnetics over corridor
3. Define drill collars
4. Test with RC drilling

DECISION OBJECTIVE

Identify whether the vector continues into a concealed mineralised source.

07 Targets 2–4: Untested portfolio

Three additional targets create multiple shots on goal

02 NORTHERN EXTENSION

Au + As

6.2 ppb Au • 29.9 ppm As

Best result — anomaly intensifies north toward the grid boundary.

Status: open / requires extension.

03 MARBLE CONTACT

REE + Au

Ce 385 • Y 522 • Th 1,079 ppm

Only two rock chips, 46 m apart.

Status: contact zone remains largely untested.

04 EREMUTUA NE

Au | structural

16.8 ppb Au in calcsilicate

Zero soil coverage.

Status: reconnaissance target with potential for follow-up.

08 Phase 1: Exploration Programme

18-month programme | 1,000m maiden drilling + target generation

09 Budget & use of proceeds

Phase 1 total: USD 450,000

TOTAL **USD 450,000**

RC drilling **\$120k** (27%)

IP / magnetics **\$65k** (14%)

Assays **\$50k** (11%)

Camp & logistics **\$45k** (10%)

Geological crew **\$40k** (9%)

Soil extension **\$35k** (8%)

Mobilisation **\$35k** (8%)

Reporting / GIS **\$25k** (6%)

Rock follow-up **\$20k** (4%)

Environmental / safety **\$15k** (3%)

Simed contribution: licence value • existing dataset • farmer relationships • land access • environmental clearance

10 Partner Proposition: Accelerated Earn-in

Low-cost entry, defined technical work programme, clear path to control

ENTRY

Option fee

USD 75k–100k

Initial equity

25–30%

COMMITMENT

Phase 1 spend

USD 450k

Programme

**18 months • 1,000m
maiden drilling**

UPSIDE

Phase 2 path

**Additional exploration
spend**

Target

51% equity

GOVERNANCE

Board seat

**Representation
proportional to equity**

Condition

**Subject to technical &
financial due diligence**

11 ESG, Stakeholders & Land Access

An exploration programme designed around existing access and local participation

LAND ACCESS

Previously granted for Damaran's 2024–2025 programme

Contact list maintained for all 10 farms

No resettlement required — pastoral land use

ENVIRONMENT

Arid environment — minimal surface-water impact expected

Standard rehabilitation bonds and environmental management plans apply

ECC in place to March 2027

LOCAL BENEFIT

Namibian field technicians, drill crews and logistics providers

Priority local procurement

fuel • camp services • transport

12 Team & Execution

Lean vehicle + partner technical capacity = capital-efficient execution

SIMED TRADING CC

Eddyson Nghituwamata

Managing Member

Focus

Strategy • Partnerships
Tenure • Stakeholder relations

TECHNICAL DELIVERY

Technical Lead

To be appointed — Namibian-registered geologist

Drilling contractor

Established Namibian contractors

Laboratory

Intertek / Genalysis

EXECUTION LOGIC

Partner supplies

Capital + technical capacity

Simed supplies

Licence + dataset + access + local relationships

Clear Phase 1 decision gate after drilling.

13 Appendix I | Selected Verified Geochemistry

Raw laboratory file values presented as exploration evidence, not a resource estimate

SAMPLE	RESULT	COORDINATES	CONTEXT
RE04772	13.11 ppb Au	595906 / 7687001	Phase 2
RE04769	5.40 ppb Au	596060 / 7686266	Phase 2
RE04489	1.40 ppb Au	595922 / 7687046	Phase 1
RE05852	8.4 ppb Au	596304 / 7686577	Soil
RE05955	6.2 ppb Au; 10.8 As	595779 / 7688047	Soil
RE05982	5.7 ppb Au; 12.2 As	595799 / 7688682	Soil
RE05973	4.4 ppb Au; 29.9 As	595918 / 7688425	Soil
C05871	16.8 ppb Au; 2.65 As	—	Calcsilicate
C05886	3.2 ppb Au; 33.03 As	—	Marble contact

14 Appendix II | Priority Targets & Diligence Notes

Coordinates and claims for technical review

TARGET CENTRES | WGS84 ZONE 33S

- 1 Onjombojumuwiwa** E595906 / N7687001
1.6 km N-S corridor
- 2 Northern Extension** E595779 / N7688047
Open north toward ~N7692000
- 3 Marble Contact** E594418 / N7687051
Contact zone
- 4 Eremutua NE** E587432 / N7692595
4 × 4 km reconnaissance area

DATA INTEGRITY / INVESTOR DILIGENCE

- Gold values are ppb, not g/t
- No JORC resource is claimed
- Coordinates should be checked against source lab files
- Licence scan should accompany the deck
- Historical report: Damaran Exploration, Jul 2024 – Feb 2025
- Original conclusion: no target significant enough to continue
- Simed thesis: raw-data re-analysis identifies four untested targets
