

OKOTJIZE

IRON ORE PROJECT

Investor Presentation

Presented by

Dr. Theresia Jeaneth Aochamus

Project Owner

PROJECT OVERVIEW

Exclusive Prospecting Licenses: EPL 8097 & EPL 7327

License Status: Active

Environmental Clearance Certificate: Active

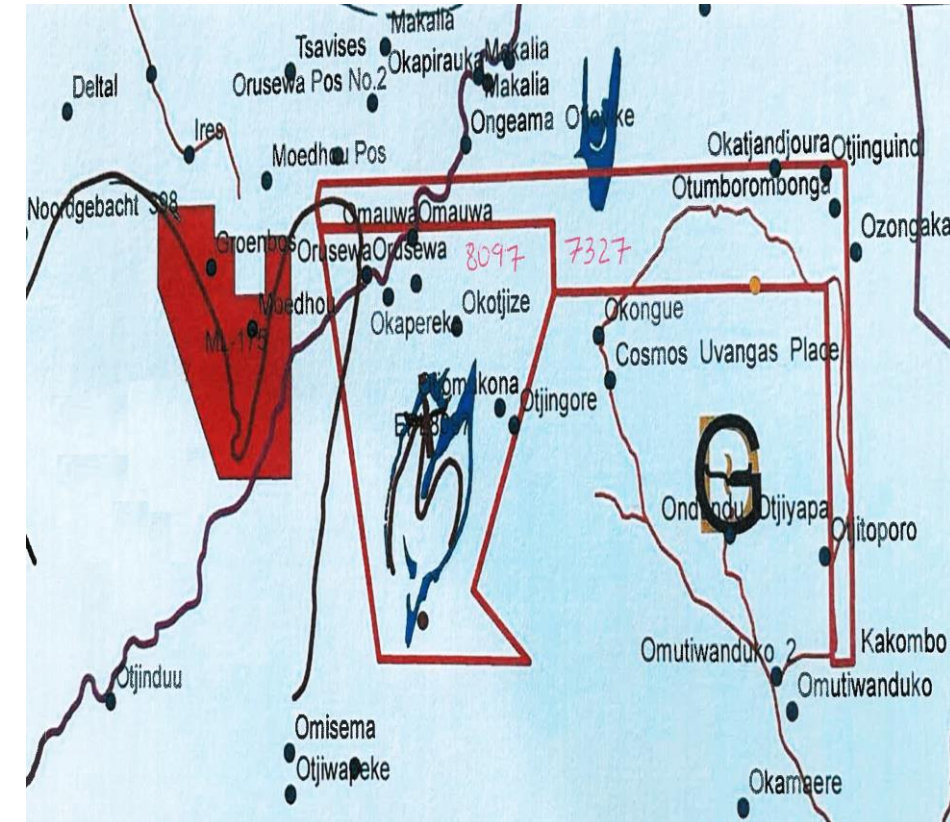

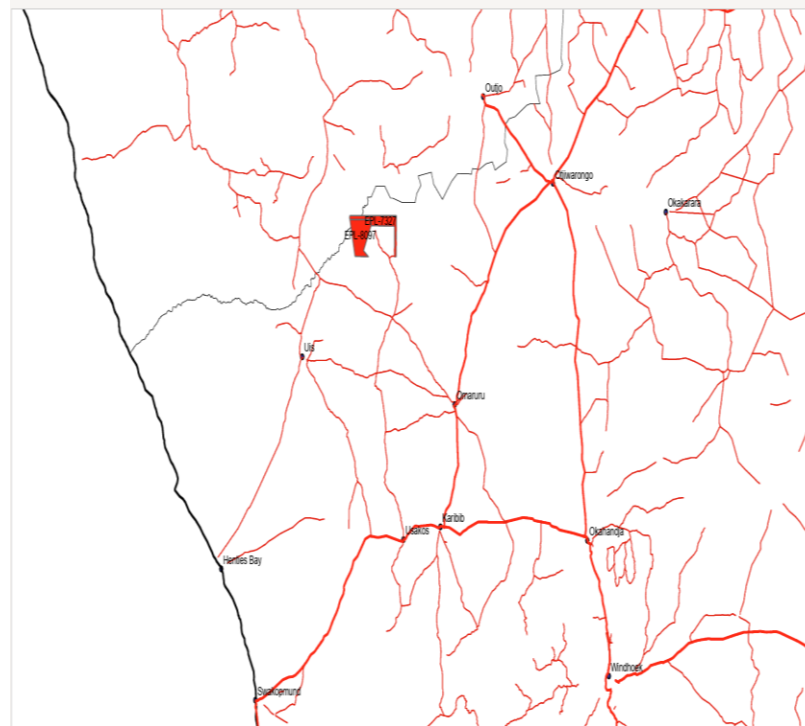

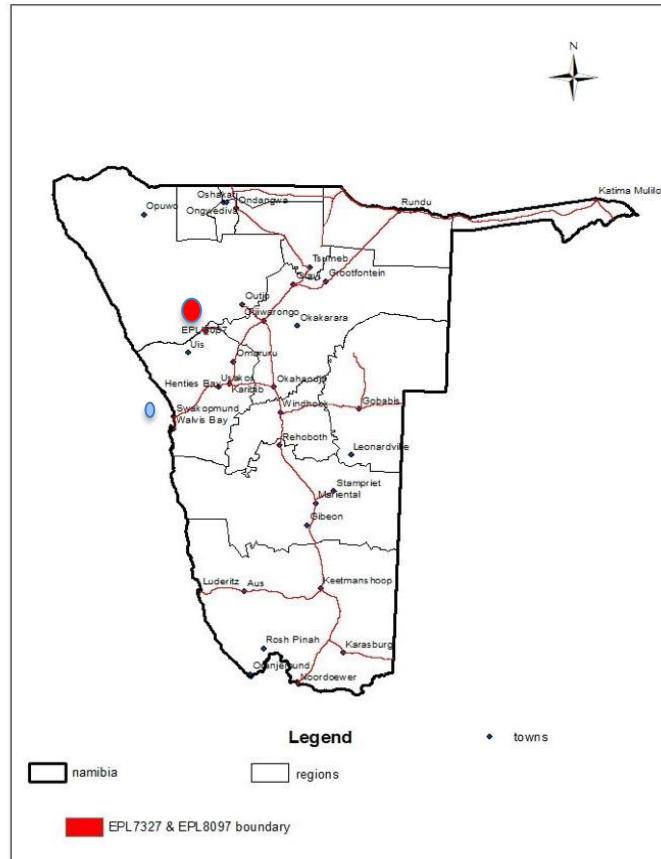

PROJECT AUTHORITY

- License Holder and Project Promoter : Dr. Theresia J. Aochamus
- EPL 8097 and EPL 7327 are registered in my name Theresia Jeaneth Aochamus.
- As the registered license holder, I have the full authority to present this project.

PROJECT LOCATION

- The project is strategically located within Namibia's premier mining regions
- The Erongo and Kunene regions of Namibia, which are known for their base ,precious and industrial mineral deposits
- Approximately 250 km from the Port of Walvis Bay
- There are well maintained gravel roads connecting to the national tarred road network

LOCALITY MAP OF EPL7327 & EPPL8097

VISION & OBJECTIVE

Vision

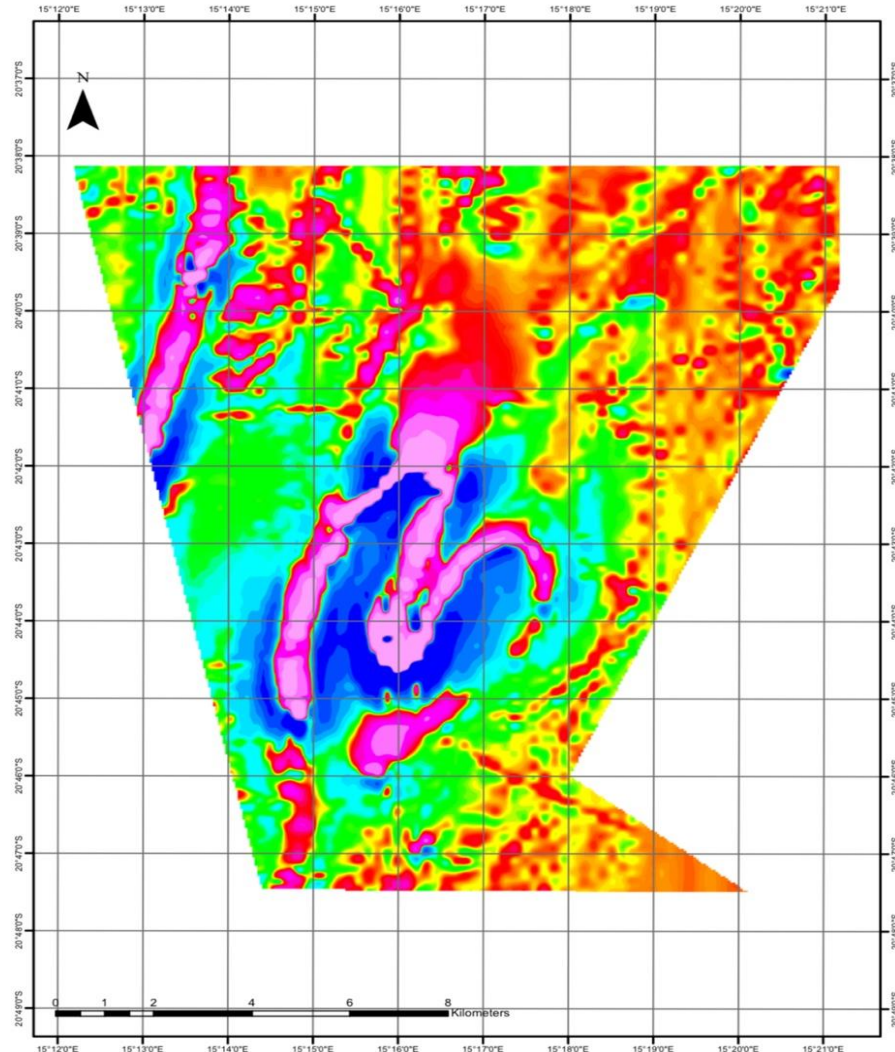

Develop the Okotjize Iron Ore Project through responsible exploration, strategic investment and sustainable mineral development.

Objective

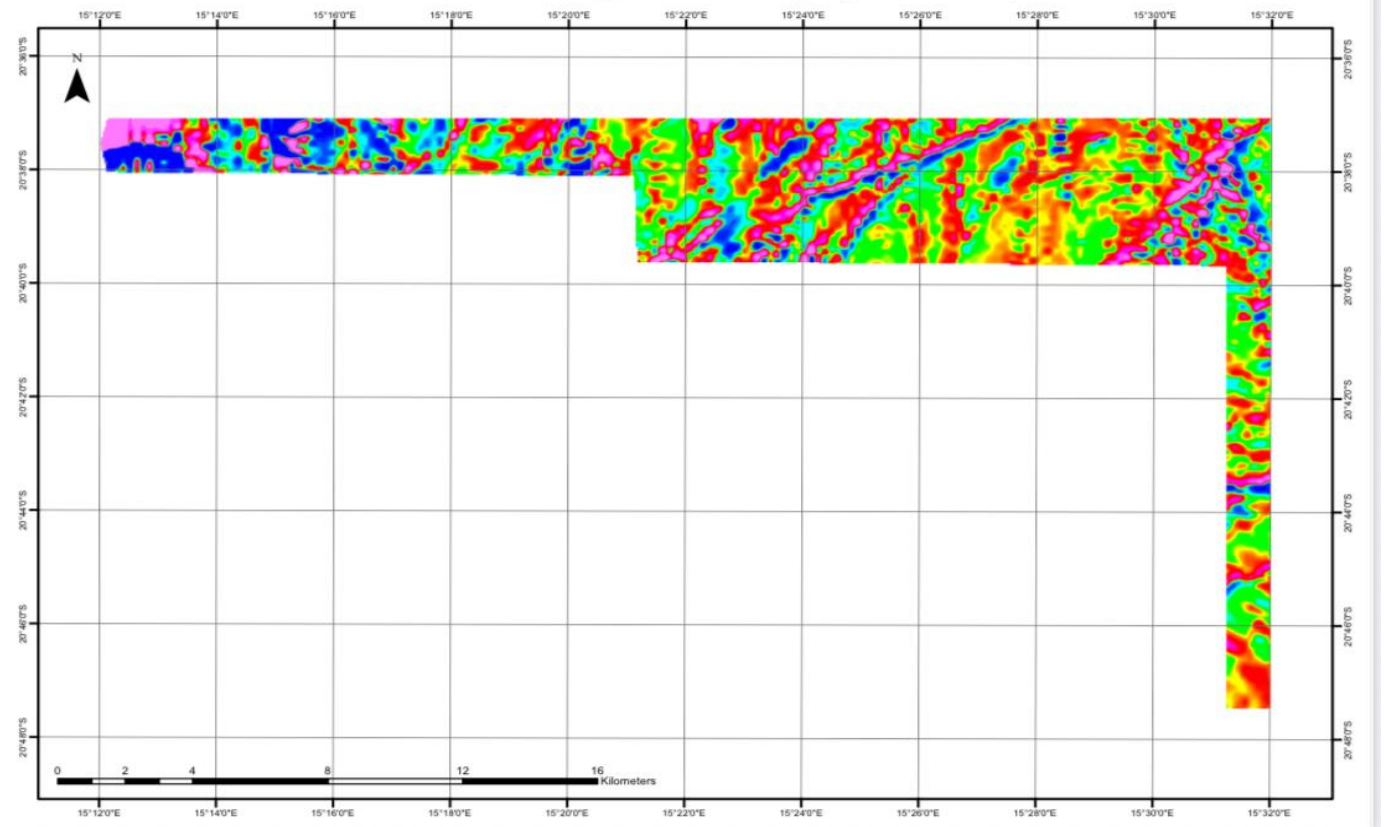

- Define the iron ore potential through systematic exploration.
- Advance the project toward resource definition.
- Secure a strategic investment partner to fund the next exploration phase.

GEOPHYSICAL INTERPRETATION

EPL 8097 Mag 1vd Geophysics Map

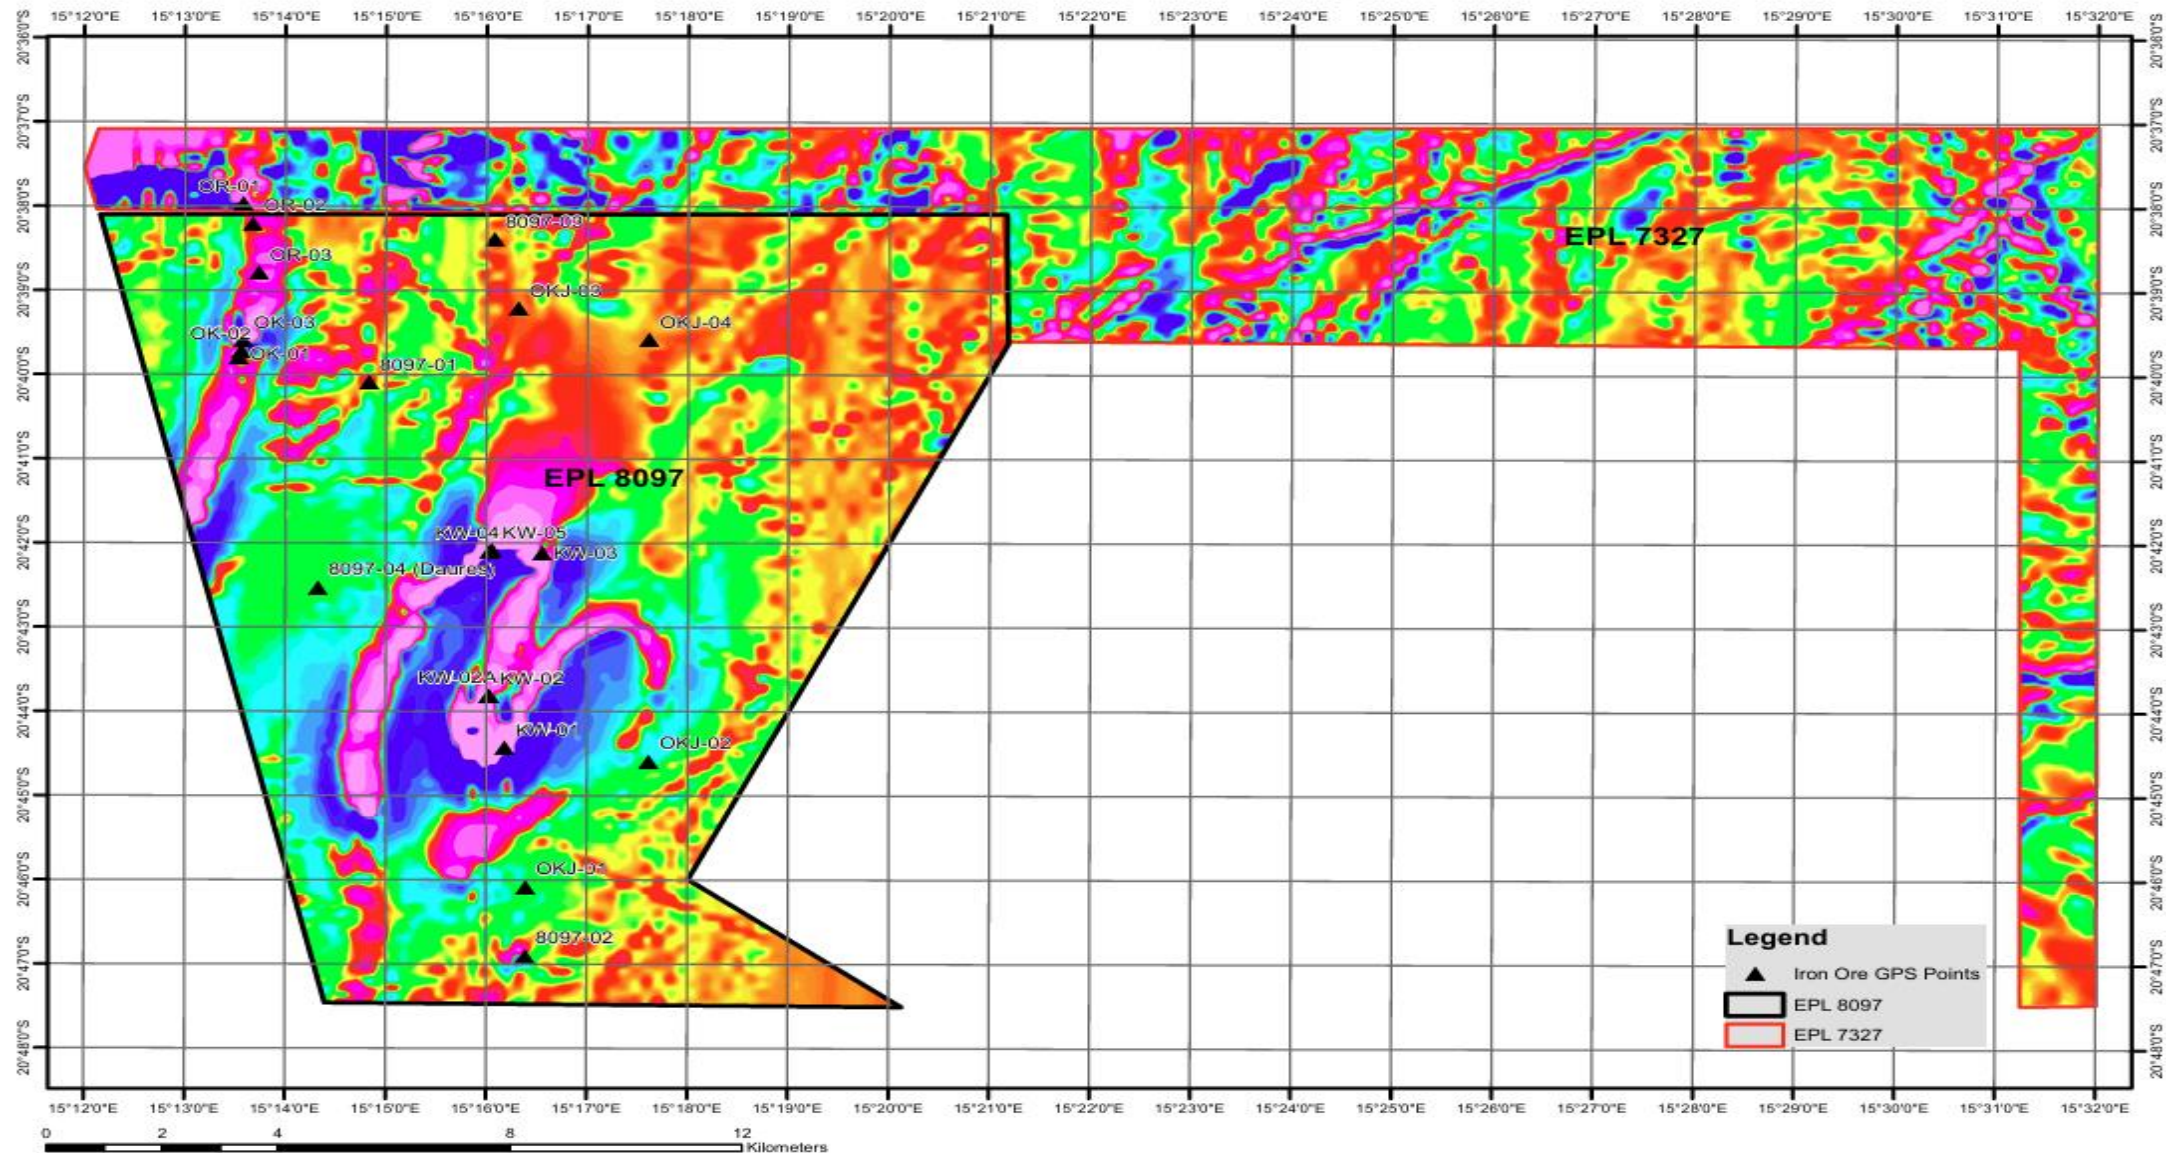

EPL 7327 Mag 1vd Geophysics Map

EXPLORATION TARGET DEFINITION

EPL 8097 & 7327 Magnetic Map

Reconnaissance Highlights:

- Extensive iron-bearing ridge system identified.
- Continuous surface mineralization observed.
- Hematite/magnetite-bearing outcrops documented.
- Representative rock samples were collected for laboratory analysis

Panoramic Mountain Overview
Panoramic view of the iron-bearing hill within EPL 8097, highlighting the extent of the surface mineralised ridge.

Geological Inspection
Field verification and geological examination of the iron-bearing outcrop during reconnaissance.

Iron-bearing Outcrop
Exposed iron-bearing outcrop investigated during geological mapping and reconnaissance.

Surface Float Material
Abundant iron-bearing float material observed across the surface during field reconnaissance.

RECONNAISSANCE HIGHLIGHTS:

- Extensive iron-bearing ridge system identified.
- Continuous surface mineralization observed.
- Hematite/magnetite-bearing outcrops documented.

Field Verification

Project owner conducting field verification and geological inspection of the iron-bearing outcrop.

Continuous Iron-bearing Ridge

Extensive surface exposure demonstrating continuity across the exploration area.

Geological Mapping

Field verification and mapping of the mineralised outcrop to define priority targets.

Iron-bearing Formation

Close-up of the iron-bearing rock formation sampled for independent laboratory analysis.

LABORATORY RESULTS – VERIFICATION

THREE INDEPENDENT LABORATORIES CONFIRMED IRON MINERALISATION

Independent Laboratory Verification

Laboratory	Highest Fe Results
Ministry of Industries, Mines and Energy	68.03% Fe (XRF analysis)
Department of the Geological Survey	70.47% Fe, 65.69% Fe, 53.38% Fe (ED-XRF analysis)
Analytical Laboratory Services	54.2% Fe (ICP-OES assay)

Key Message

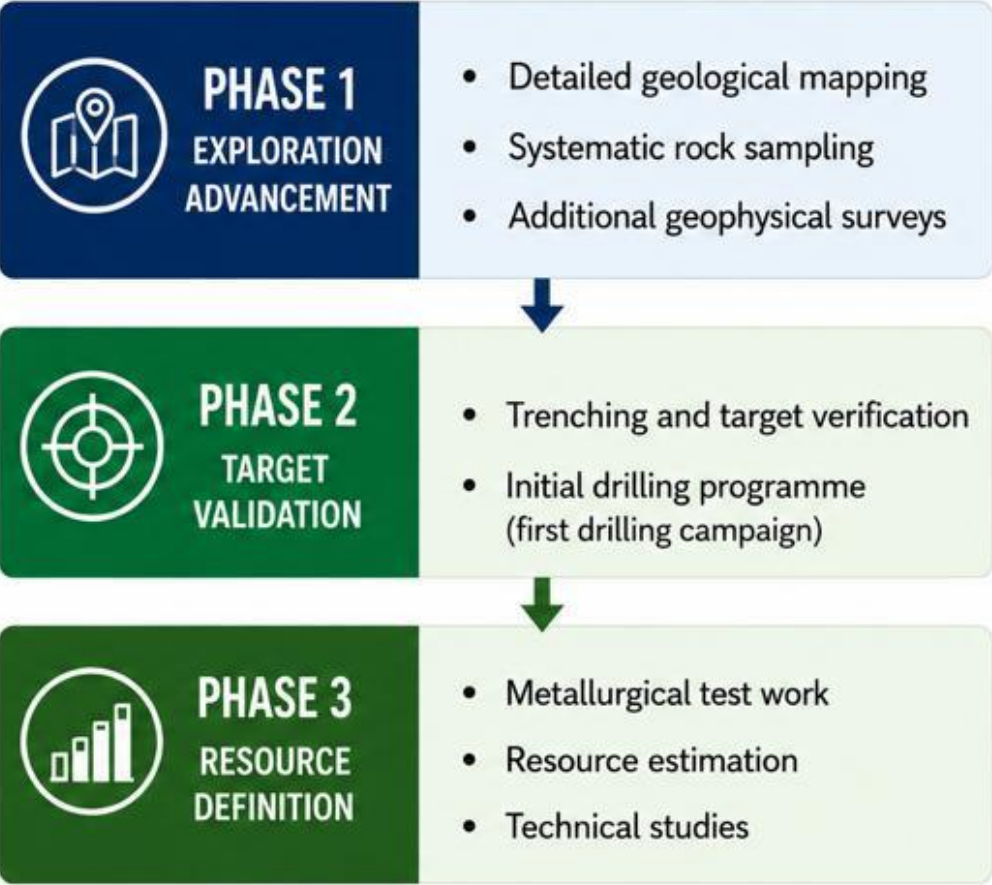

- Three independent laboratories confirmed significant iron mineralisation.
- The highest laboratory iron value recorded was 70.47% Fe.
- Results support advancing the project to detailed exploration, geophysical surveys and drilling.

EXPLORATION RESULTS

- Reconnaissance confirmed extensive iron-bearing outcrops across the project area.
- Surface sampling and field verification were completed.
- GPS target mapping completed across EPL 8097 and EPL 7327.
- Photographic and videographic documentation completed
- Magnetic interpretation supports the continuation of iron-bearing structures
- Laboratory results confirmed significant iron mineralisation

DEVELOPMENT STRATEGY & FUNDING

A phased exploration programme designed to advance the Okotjize Iron Ore Project from exploration targets to resource definition.

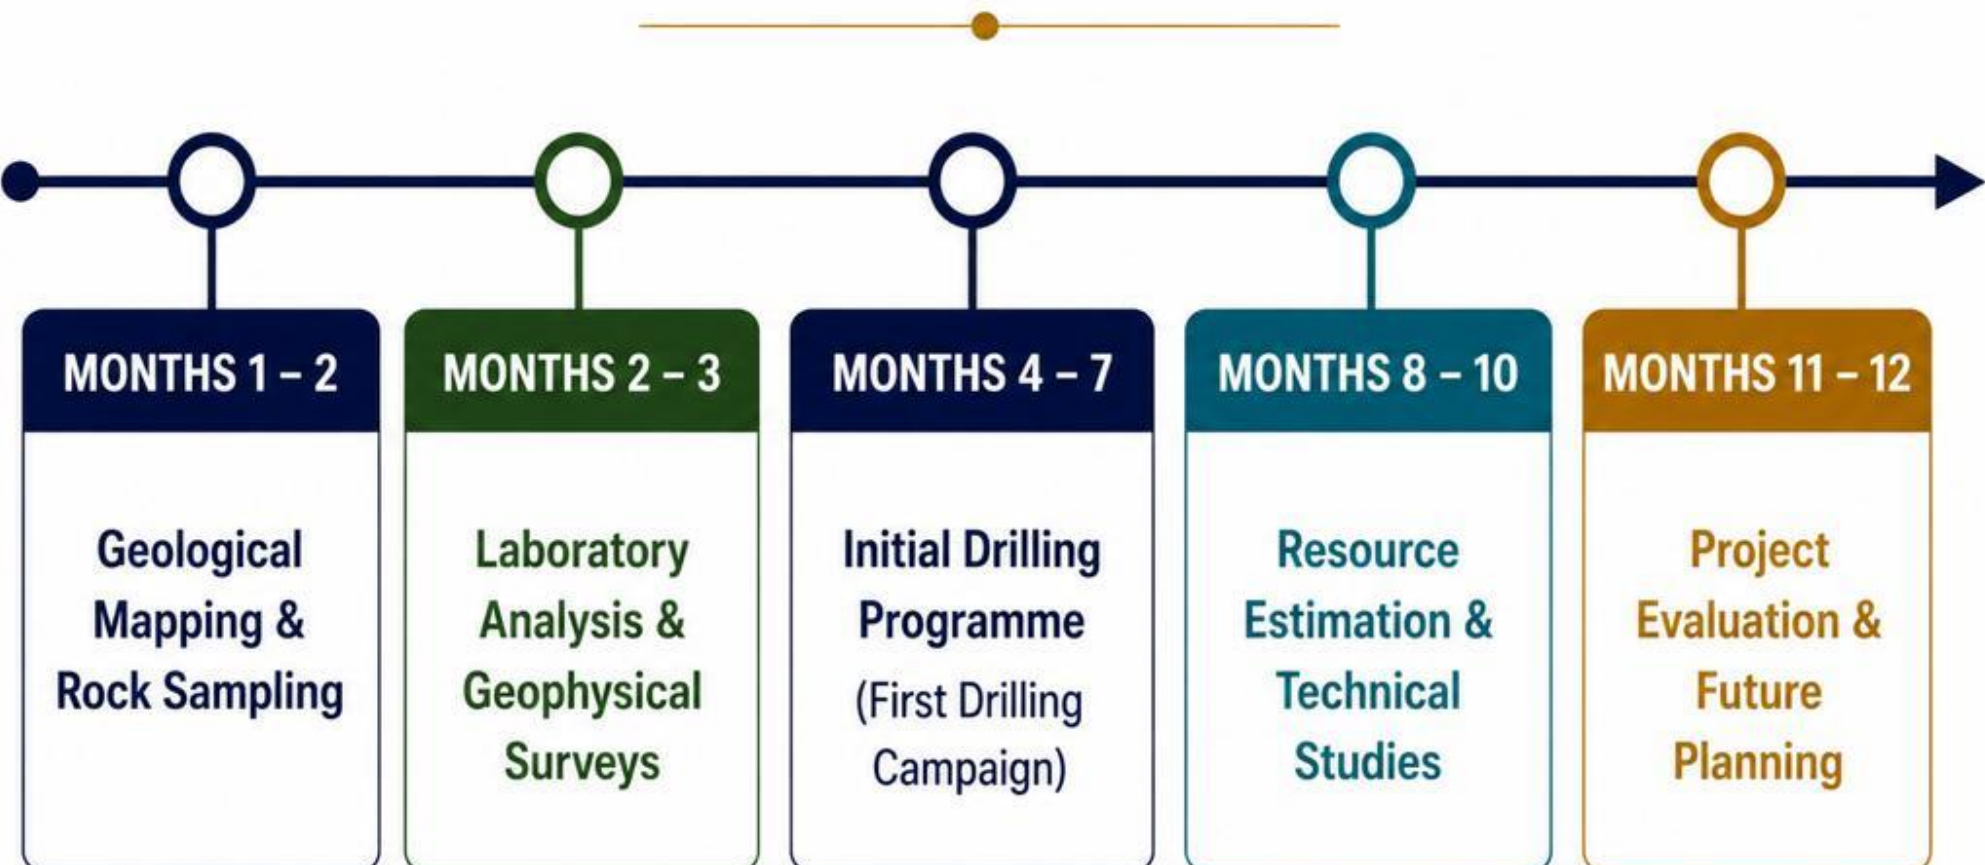

FUNDING REQUIREMENT: N\$15 MILLION	
ACTIVITY	BUDGET (N\$)
Geological Mapping & Drill Target Definition	1.5 million
Sampling & Laboratory Assays	1.5 million
Geophysical Surveys	1.0 million
Initial Drilling Programme (First Drilling Campaign)	8.0 million
Resource Estimation & Technical Studies	2.0 million
Environmental, Project Management & Contingency	1.0 million
TOTAL	N\$15 MILLION

KEY MESSAGE

Investment will advance the project from exploration targets to resource definition.

PROJECT TIMELINE

MONTHS 1 – 2

**Geological
Mapping &
Rock Sampling**

MONTHS 2 – 3

**Laboratory
Analysis &
Geophysical
Surveys**

MONTHS 4 – 7

**Initial Drilling
Programme
(First Drilling
Campaign)**

MONTHS 8 – 10

**Resource
Estimation &
Technical
Studies**

MONTHS 11 – 12

**Project
Evaluation &
Future
Planning**

12-MONTH EXPLORATION PROGRAMME

WHY INVEST IN THE OKOTJIZE IRON ORE PROJECT?

- Active EPLs and Environmental Clearance Certificate
- Two adjacent licenses covering a large prospective area
- High grade iron ore potential with encouraging laboratory results
- Large exploration target with significant upside
- Strategic location with access to Walvis Bay Port
- Clear 12-month exploration strategy with resource definition programme
- Strong community support and positive engagement with the traditional authority

THANK YOU

*Exploring Opportunity.
Building Value.*
