

EPL 10571

Copper & Gold Exploration Opportunity

Okahandja District, Otjozondjupa Region, Republic of Namibia

Funding sought: N\$15,000,000 (≈ US\$915,000)

Structure: Equity / Joint Venture participation

Presented by: Ms. Naomi N. Kefas, Econawa Exploration CC

Illustrative — Damara Belt structural corridor, copper-gold veining

Important Notice & Forward-Looking Statements

This presentation has been prepared by Econawa Exploration CC ("Econawa") solely for the purpose of providing background information to prospective investors and partners in connection with EPL 10571, and does not constitute an offer or invitation to subscribe for or purchase any securities or interest, nor investment, legal, tax or financial advice.

EPL 10571 is a greenfield exploration project. No mineral resource or mineral reserve, as defined by SAMREC, JORC or an equivalent reporting code, has been established. References to regional analogue mines (including Matchless and Otjihase) are provided for general geological context only and are not indicative of the presence, extent or grade of mineralisation on EPL 10571. All geological interpretations should be independently verified by a suitably qualified and independent Competent Person / Qualified Person before being relied upon.

This document contains forward-looking statements, including statements about future exploration plans, funding requirements, timelines and potential outcomes. These statements are subject to significant risks and uncertainties, and actual results may differ materially. Commodity prices, market data and third-party sources cited herein were believed accurate as at the date of preparation but have not been independently verified by Econawa.

Recipients should conduct their own independent due diligence, including legal, technical and financial review, before making any investment decision. This document is confidential and may not be reproduced or distributed, in whole or in part, without the prior written consent of Econawa Exploration CC.

Investment Snapshot

EPL 10571 is a transaction-ready, greenfield copper-gold exploration licence in Namibia's Damara Belt — a recognised, actively-reinvested copper province — seeking growth capital to fund a systematic, phased exploration programme.

N\$15M

Funding sought
(≈ US\$915,000)

13,846 ha

Licence area,
EPL 10571

Cu + Au

Target
commodities

5

Phased
exploration stages

Proven district positioning

Located within the Damara Belt / Matchless Belt corridor, host to the historic Matchless and Otjihase copper mines — both now being actively recommissioned.

De-risked, staged capital deployment

A 5-phase programme with defined technical gates between stages, from mapping through to drilling and resource evaluation.

Transaction-ready

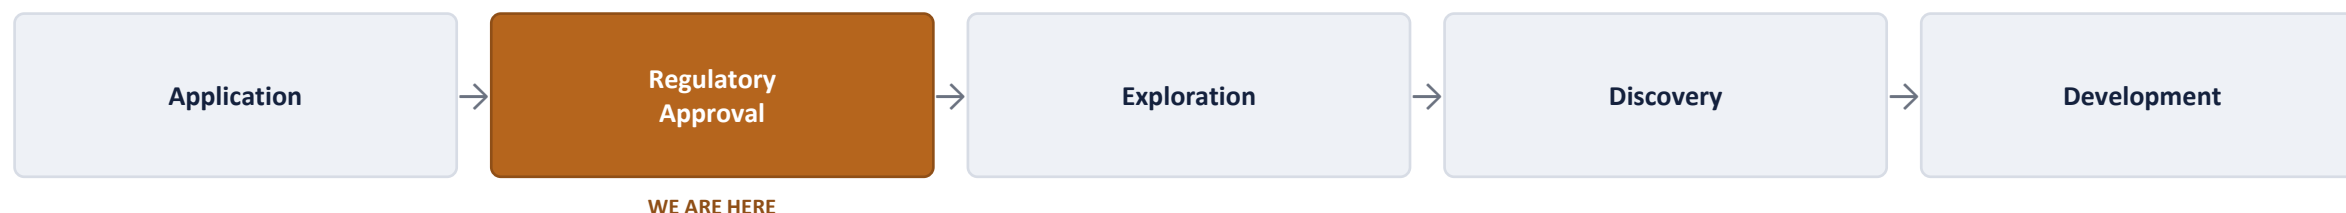

Licence application lodged, geological review complete, exploration programme and budget defined and costed.

Project Overview & Licence Status

Field	Detail
Company	Econawa Exploration CC
Licence	EPL 10571
Area	13,845.7306 ha
Commodity	Copper & Gold
Stage	Greenfield Exploration
Application date	2 October 2024
Status	Pending Environmental Clearance Certificate (ECC) / Notice of Intention to Grant
Rights covered	Base & rare metals, precious metals, industrial minerals, dimension stone

EPL 10571 was applied for on 2 October 2024 and covers exploration rights for base and rare metals, precious metals, industrial minerals and dimension stone. Geological review indicates the licence occupies a favourable structural position within the Damara Belt. The objective is to identify economically viable VMS-style copper mineralisation with associated gold through a phased, staged exploration programme, funded to progress from geological mapping through to an initial resource evaluation.

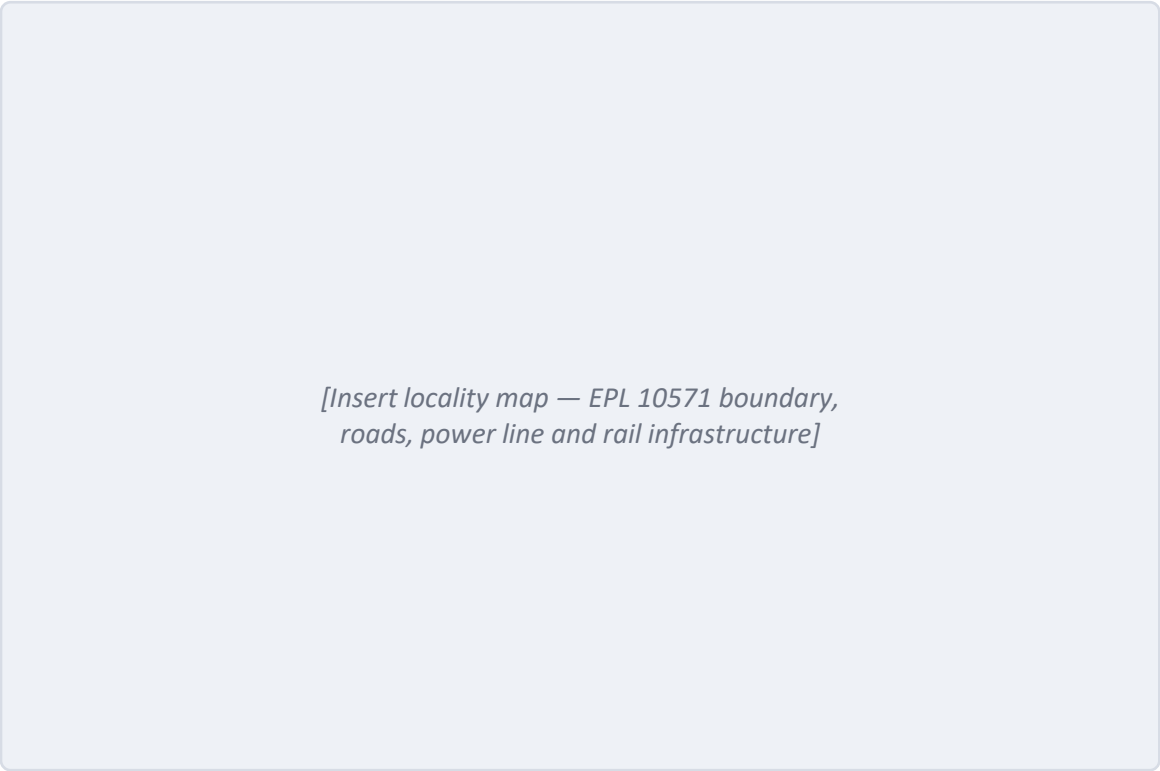

The EPL has not yet been formally granted — Econawa has received a Notice of Intention to Grant, contingent on ECC issuance by the Ministry of Environment and Tourism. Investors should structure funding drawdowns around confirmed licence grant (see Risk Factors, Slide 14).

Location & Infrastructure

Attribute	Detail
Nearest town	Otjimbingwe (≈ 31.8 km west)
Regional centre	Okahandja (≈ 48.4 km northeast)
Road access	D1958 → M0052 → B1 national highway
Climate	Semi-arid; year-round exploration conditions

The licence benefits from favourable topography, a semi-arid climate supporting year-round field operations, and proximity to established labour, transport and utility corridors linking Okahandja to the B1 national highway — reducing logistics cost and lead time for the exploration programme.

Geology & Mineralisation

Parameter	Detail
Target style	VMS-style copper-gold mineralisation
Host rocks	Kuiseb Formation schists; Hureb Formation, amphibolites, quartzites, calc-silicates
Structural setting	Okahandja Lineament Zone, Damara Orogen
Mineralisation controls	Isoclinal folding, faulting, lithological contacts

Historical indicators: Historical exploration over the licence area has identified arsenic anomalies, copper enrichment, gossans and malachite staining, consistent with hydrothermal activity and concealed sulphide mineral potential.

The source, vintage and QA/QC status of the historical geochemical dataset referenced above should be documented and independently reviewed as part of investor due diligence — this is a common and reasonable early request (see Slide 15).

Regional Analogues — A Proven, Reactivating District

EPL 10571 sits within the same Damara / Matchless Belt corridor as two of Namibia's best-known historic copper mines. Both are currently being actively recommissioned by an independent operator — direct, recent evidence of renewed institutional and technical confidence in this belt.

	Matchless Mine	Otjihase Mine
Location	≈ 25 km SW of Okahandja	Near Windhoek, Khomas Region
Deposit style	Besshi-type VMS, Matchless Amphibolite Belt	VMS copper-pyrite, Damara Belt
Production history	Operated by Newmont to 1983; multiple later restarts	Discovered 1972; produced 1976–1983 and 2011–2015
Current status	Care & maintenance; held by Consolidated Copper Corp	Care & maintenance; held by Consolidated Copper Corp
2026 development	Pre-feasibility study targeted for completion 2Q 2026	Pre-feasibility study targeted for completion 2Q 2026

Provided for geological and market context only. This does not imply that EPL 10571 hosts mineralisation of similar style, grade or scale — that can only be established through the exploration programme outlined in this document, verified by an independent Competent/Qualified Person.

Why Copper & Gold, Why Now

US\$10,000–12,000/t

2026 copper price forecasts from BofA, Deutsche Bank, Morgan Stanley & Goldman Sachs — near-record levels

~330,000 t

Projected 2026 global refined copper supply shortfall; some forecasters see a structural deficit beginning as early as 2026

28 → 42 Mt/yr

Projected global copper demand growth, 2025–2040 (+50%), driven by electrification, EVs, grid buildout and AI data-centre power demand

Gold provides a secondary revenue stream and price-cycle diversification within the same VMS mineralised system, reducing the project's single-commodity exposure.

Namibia's copper sector is seeing renewed capital: Consolidated Copper Corp is progressing feasibility studies at Matchless/Otjihase and Tschudi, and is targeting a stock exchange listing — alongside other active interior-belt exploration such as the Omitiomire copper project.

Exploration Strategy — 5-Phase Programme

Recommended structuring: each phase concludes with a technical review and go/no-go decision before capital is committed to the next stage — limiting capital-at-risk and giving investors defined re-evaluation points.

Total programme duration: approximately 12 months from licence grant and first funds drawdown.

Use of Funds

#	Activity	%	N\$	≈ US\$
1	Geological Mapping & Structural Interpretation	15%	2,250,000	137,000
2	Geochemical Surveys (soil, rock, stream sediment)	15%	2,250,000	137,000
3	Ground Geophysics (magnetic & EM)	20%	3,000,000	183,000
4	RC & Diamond Drilling	30%	4,500,000	274,000
5	Laboratory Analysis & Geological Modelling	10%	1,500,000	91,000
6	Project Management, Compliance & Reporting	10%	1,500,000	91,000
	TOTAL	100%	15,000,000	915,000

USD figures are indicative only, converted at ≈ N\$16.4 / US\$1 (August 2026) and will vary with prevailing exchange rates.

Objective: to systematically evaluate EPL 10571 through a staged programme that generates reliable geological data, defines mineralisation potential, and supports future resource definition and project development.

Investment Structure & Terms

Term	Detail
Funding required	N\$15,000,000 (≈ US\$915,000)
Instrument	Equity and/or Joint Venture participation
Equity / JV split offered	<i>[ECONAWA TO CONFIRM: percentage interest and valuation basis for this raise]</i>
Use of proceeds	Phase 1–5 exploration programme (≈ 12 months) as set out in Slides 9–10
Follow-on capital	Not included in this raise — if Phase 5 confirms a resource, a substantially larger raise will be required for feasibility studies, permitting and mine development
Key milestones	<i>[ECONAWA TO CONFIRM: licence grant date, ECC issuance, drill-result checkpoints, resource-estimate target date]</i>
Governance	<i>[ECONAWA TO CONFIRM: JV/board representation, reserved matters and information rights offered to the investor]</i>

Items in brackets require a decision by Econawa's principals before this deck is circulated to investors — these are typically among the first questions raised in due diligence (see Slide 14).

Investor Value Proposition

Strong commodity exposure. Proven district. High upside. Managed risk.

1

Exposure to Copper & Gold

Strategic exposure to metals critical for the global energy transition and industrial growth, at a point of forecast structural supply deficit.

2

Entry into a Proven District

Positioned within the Damara / Matchless Belt, alongside historic producing mines now being actively recommissioned.

3

Greenfield Upside

Full exploration upside from a licence not previously drill-tested under a systematic modern programme.

4

Phased, De-Risked Approach

A disciplined 5-phase exploration plan with technical gates designed to unlock value while limiting capital-at-risk at each stage.

Management & Advisory Team

Ms. Naomi N. Kefas

100% Member, Econawa Exploration CC

[ECONAWA TO CONFIRM: relevant qualifications, geological / mining / commercial track record and prior project experience to be inserted]

Mr. Solomon

[ECONAWA TO CONFIRM: role / title to be confirmed]

[ECONAWA TO CONFIRM: bio and relevant experience to be inserted]

Investors will expect this section to demonstrate the team's relevant technical (geology / mining engineering) and commercial credentials, plus details of any independent consulting geologist, Competent Person or technical advisor engaged on the project. A one-page CV per named individual is recommended as an annexe. This is consistently one of the first sections international and institutional investors review — completing it strengthens credibility significantly.

Risk Factors & Mitigation

Risk	Description	Mitigation
Geological / exploration risk	No guarantee of economic mineralisation on EPL 10571	Phased programme with technical go/no-go gates; geophysics used to prioritise drill targets before capital-intensive drilling
Licence / regulatory risk	EPL status is pending ECC; Namibia MME data show 174 of 640 recent EPL applicants lapsed for failing to secure an ECC in time	Early, proactive engagement with the Ministry of Environment and Tourism; experienced local regulatory support
Commodity price risk	Copper/gold prices are cyclical and forecasts vary materially by analyst	Phased capital deployment allows pausing between stages if prices weaken
Funding / dilution risk	This raise covers exploration only; a much larger raise would be needed if a resource is confirmed	Transparent, milestone-based structure communicated up front (Slide 11)
Governance risk	Licence currently held 100% by a single member of a Close Corporation (CC)	Standard JV protections recommended: board/committee representation, reserved matters, information rights
Community / ESG risk	Otjimbingwe is a historic community area with cultural significance	Early community engagement, environmental management plan, local employment commitments

NEXT STEPS

- 1 Data room access & technical due diligence
- 2 Term sheet negotiation and JV / equity documentation
- 3 EPL 10571 licence grant & ECC finalisation
- 4 Funds drawdown and Phase 1 field mobilisation
