OUR TRANSITION TO GREEN MINING

2024 & EARLIER

▶ Initial Otjikoto Power Plant (2014 – 2018)

- 100% Cat HFO generators
- HFO consumption ranging between 20-24 million litres per year

▶ Addition of a Solar Plant (2018 – 2022)

- 7 MWdc (6 Mwac) solar plant with CAT thin film panels
- Produces approximately 13% of power
- Reduced HFO consumption by more than 3 million litres per year
- ~ 115MNAD Capital Investment

▶ Connected to the Namibian Power grid (September 2022)

- Use of HFO units for emergencies only
- Zero HFO Consumption, runs on Diesel
- ~ 200MNAD Capital Investment

2025 +

▶ Power Purchase Agreement (PPA) for Additional Solar Power (Q1 2025)

- New third-party solar plant constructed 20km from the Otjikoto Mine
- Supplies approximately 25% of total power requirements
- Eight-year PPA which can be extended
- Commissioned end of February 2025
- 200M NAD Investment – Zero Capital outlay for B2Gold
- Increased use of solar energy at the Otjikoto Mine to between 35% and 40% of total demand

Development Decision Approved with Further Potential Upside

- High-grade, Otjikoto-style mineralization discovered ~4 km southwest of the existing open pit at Otjikoto
- Based on the results of the PEA, the Company has approved a development decision for the Antelope underground, which could begin to contribute to **gold production at Otjikoto as early as 2028**
- Over **36,000 m** drilled at the Springbok Zone to inform the initial Inferred Mineral Resource Estimate¹
- 67% increase** in contained gold ounces since February 2025 PEA²
